

CALENDRO – A Productivity Timer Application

Desthiny T. Dumagan
BS – Information Technology Section 2B

January 23 2026

Introduction

I. Brief overview of the real-world problem

People often struggle to accurately track how they spend their time on digital devices. Many underestimate the hours they spend on social media, overestimate the time they dedicate to work or study, and struggle to maintain focus due to shorter attention spans.

II. Why it is relevant

With the rise of digital distractions, understanding how time is actually spent has become important for productivity and mental well-being. Many individuals want to manage their time better, but lack tools that give clear, real-time feedback on their device usage.

III. Who is affected

Students, professionals, and anyone who spends a significant amount of time on computers or smartphones are affected. This includes people who want to track their studying, working, or other meaningful activities, as well as those who aim to reduce distractions and improve focus.

Problem Description

IV. Detailed explanation of the problem

People frequently misjudge the amount of time they spend on their devices. Many underestimate social media use, often while “doom scrolling,” and overestimate how much productive work they complete. Attention spans have also declined over the years, making it harder for individuals to stay focused. Without accurate tracking, people cannot reliably measure their productivity or make improvements.

For example, Taparia (2021) found that 52% of people could not correctly guess which app they used the most and were off by about 14 hours in their weekly estimates. Gloria Mark noted that the average attention span dropped from 2.5 minutes in 2004 to just 47 seconds today. Rampell (2012) reported that Americans overestimate their work hours by 5–10%, with the most exaggerated estimates coming from those who work the longest weeks.

V. Proposed Solution

Calendro is a web and mobile application designed to help users track their productive time, improve focus, and visualize progress. It combines a timer, calendar, and progress tracking system to make productivity measurable and motivating.

VI.Features

1. Timer/Stopwatch – Track focused study or work sessions and save the time to the current day.
2. Calendar View – Display hours and minutes studied per day, week, and month to motivate users by showing their progress.
3. Daily Diary – Allow users to write notes for each day and view snapshots of previous entries.
4. Indicators – Mark days with completed study sessions or diary entries for quick visual feedback.

VII. Target Users

Students, professionals, and anyone who wants to track their productivity, maintain focus, and develop consistent habits.

VIII. Conclusion

Many people struggle to track their time and stay focused. Calendro provides a simple way to measure productive work, visualize progress, and stay motivated. By combining timers, calendars, and a points system, it helps users understand their habits and improve productivity.
